AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph that begins on p. 8, line 29 of the published PCT application with the following replacement paragraph:

After ceasing receiving, the DVB receiver 35 may at step D and during its timeout period, listen to messages on another channel Y, which carries announcement messages $\underline{Y1, Y2, Y3, Y4 \ldots Yi, Yj, Yk}$ concerning one or more of the subcategories to which the messages on channel X relate. Alternatively, the DVB receiver 35 may sleep at step E before again receiving the messages $\underline{X_i}$ on channel X at step F. To ensure full integrity of the received messages, the DVB receiver 35 may perform recursive rescan at the end of the timeout period of step E.
